1.1. Table A.1 – Software safety requirements specification

| | Technique/Measure * | Ref. | SIL 1 | SIL 2 | SIL 3 | SIL 4 | Verification of technique/measure | | |
|--|--|--------------|-------|-------|-------|-------|-----------------------------------|--|--------|
| | | | | | | | Applied | Description | Result |
| 1a | Semi-formal methods | Table B.7 | + | + | ++ | ++ | Yes | Block Diagram of SW Modules implemented in 05_SW-System_Module_Specification | OK |
| 1b | Formal methods | B.2.2, C.2.4 | 0 | + | + | ++ | -- | -- | -- |
| 2 | Forward traceability between the system safety requirements and the software safety requirements | C.2.11 | + | + | ++ | ++ | Yes | Traceability can be verified in 00_Requirement_Tracking_Template_V01_2 | OK |
| 3 | Backward traceability between the safety requirements and the perceived safety needs | C.2.11 | + | + | ++ | ++ | Yes | Traceability can be verified in 00_Requirement_Tracking_Template_V01_2 | OK |
| 4 | Computer-aided specification tools to support appropriate techniques/measures above | B.2.4 | + | + | ++ | ++ | No | Model Based test generation is not implemented for this project | OK |
| <p>NOTE 1: The software safety requirements specification will always require a description of the problem in natural language and any necessary mathematical notation that reflects the application.</p> <p>NOTE 2: The table reflects additional requirements for specifying the software safety requirements clearly and precisely.</p> <p>NOTE 3: See Table C.1 of IEC 61508-2</p> <p>NOTE 4: The references (which are informative, not normative) "B.x.x.x", "C.x.x.x" in column 3 (Ref.) indicate detailed descriptions of techniques/measures given in Annexes B and C of IEC 61508-7.</p> | | | | | | | | | |
| <p>* Appropriate techniques/measures shall be selected according to the safety integrity level. Alternate or equivalent techniques/measures are indicated by a letter following the number. It is intended the only one of the alternate or equivalent techniques/measures should be satisfied. The choice of alternative technique should be justified in accordance with the properties, given in Annex C, desirable in the particular application.</p> | | | | | | | | | |

1.2. Table A.2 – Software design and development – software architecture design

| | Technique/Measure * | Ref. | SIL 1 | SIL 2 | SIL 3 | SIL 4 | Verification of technique/measure | | |
|----|--|-----------|-------|-------|-------|-------|-----------------------------------|--|--------|
| | | | | | | | Applied | Description | Result |
| | Architecture and design feature | | | | | | | | |
| 1 | Fault detection | C.3.1 | 0 | + | ++ | ++ | Yes | Fault detection mechanism implemented to detect deviation in the temperature sensor data | OK |
| 2 | Error detecting codes | C.3.2 | + | + | + | ++ | Yes | Physical limits are verified for ensuring the data integrity of the sensor data | OK |
| 3a | Failure assertion programming | C.3.3 | + | + | + | ++ | No | This project has no given precondition and postcondition according to the protocol | OK |
| 3b | Diverse monitor techniques (with independence between the monitor and the monitored function in the same computer) | C.3.4 | 0 | + | + | 0 | -- | -- | -- |
| 3c | Diverse monitor techniques (with separation between the monitor computer and the monitored computer) | C.3.4 | 0 | + | + | ++ | -- | -- | -- |
| 3d | Diverse redundancy, implementing the same software safety requirements specification | C.3.5 | 0 | 0 | 0 | + | -- | -- | -- |
| 3e | Functionally diverse redundancy, implementing different software safety requirements specification | C.3.5 | 0 | 0 | + | ++ | -- | -- | -- |
| 3f | Backward recovery | C.3.6 | + | + | 0 | -- | -- | -- | -- |
| 3g | Stateless software design (or limited state design) | C.2.12 | 0 | 0 | + | ++ | -- | -- | -- |
| 4a | Re-try fault recovery mechanisms | C.3.7 | + | + | 0 | 0 | -- | -- | -- |
| 4b | Graceful degradation | C.3.8 | + | + | ++ | ++ | -- | -- | -- |
| 5 | Artificial intelligence - fault correction | C.3.9 | 0 | -- | -- | -- | -- | -- | -- |
| 6 | Dynamic reconfiguration | C.3.10 | 0 | -- | -- | -- | -- | -- | -- |
| 7 | Modular approach | Table B.9 | ++ | ++ | ++ | ++ | Yes | Sub functions are implemented as per 05_SW-System_Module_Specification | |
| 8 | Use of trusted/verified software elements (if available) | C.2.10 | + | ++ | ++ | ++ | -- | -- | -- |

Table A.2

| | Technique/Measure * | Ref. | SIL 1 | SIL 2 | SIL 3 | SIL 4 | Verification of technique/measure | | |
|-----|--|--------------|-------|-------|-------|-------|-----------------------------------|--|--------|
| | | | | | | | Applied | Description | Result |
| | Architecture and design feature | | | | | | | | |
| 9 | Forward traceability between the software safety requirements specification and software architecture | C.2.11 | + | + | ++ | ++ | Yes | Traceability can be verified in 00_Requirement_Tracking_Template_V01_2 | OK |
| 10 | Backward traceability between the software safety requirements specification and software architecture | C.2.11 | + | + | ++ | ++ | Yes | Traceability can be verified in 00_Requirement_Tracking_Template_V01_2 | OK |
| 11a | Structured diagrammatic methods ** | C.2.1 | ++ | ++ | ++ | ++ | Yes | Implemented as per 05_SW-System_Module_Specification | OK |
| 11b | Semi-formal methods ** | Table B.7 | + | + | ++ | ++ | -- | -- | -- |
| 11c | Formal design and refinement methods ** | B.2.2, C.2.4 | 0 | + | + | ++ | -- | -- | -- |
| 11d | Automatic software generation | C.4.6 | + | + | + | + | -- | -- | -- |
| 12 | Computer-aided specification and design tools | B.2.4 | + | + | ++ | ++ | No | Not required considering the project scope | OK |
| 13a | Cyclic behaviour, with guaranteed maximum cycle time | C.3.11 | + | ++ | ++ | ++ | No | Project implemented as hardware independent library | OK |
| 13b | Time-triggered architecture | C.3.11 | + | ++ | ++ | 0 | -- | -- | -- |
| 13c | Event-driven, with guaranteed maximum response time | C.3.11 | + | ++ | ++ | 0 | -- | -- | -- |
| 14 | Static resource allocation | C.2.6.3 | 0 | + | ++ | ++ | No | Not required considering the project scope | OK |
| 15 | Static synchronisation of access to shared resources | C.2.6.3 | 0 | 0 | + | ++ | No | Not required considering the project scope | OK |

Table A.2

NOTE 1: Some of the methods given in Table A.2 are about design concepts, others are about how the design is represented.

NOTE 2: The measures in this table concerning fault tolerance (control of failures) should be considered with the requirements for architecture and control of failures for the hardware of the programmable electronics in IEC 61508-2.

NOTE 3: See Table C.2 of IEC 61508-3

NOTE 4: The group 13 measures apply only to systems and software with safety timing requirements.

NOTE 5: Measure 14. The use of dynamic objects (for example on the execution stack or on a heap) may impose requirements on both available memory and also execution time. Measure 14 does not need to be applied if a compiler is used which ensures a) that sufficient memory for all dynamic variables and objects will be allocated before runtime, or which guarantees that in case of memory allocation error, a safe state is achieved; b) that response times meet the requirements.

NOTE 6: Measure 4a. Re-try fault recovery is often appropriate at any SIL but a limit should be set on the number of retries.

NOTE 7: The references (which are informative, not normative) "B.x.x.x", "C.x.x.x" in column 3 (Ref.) indicate detailed descriptions of techniques/measures given in Annexes B and C of IEC 61508-7.

* Appropriate techniques/measures shall be selected according to the safety integrity level. Alternate or equivalent techniques/measures are indicated by a letter following the number. It is intended the only one of the alternate or equivalent techniques/measures should be satisfied. The choice of alternative technique should be justified in accordance with the properties, given in Annex C, desirable in the particular application.

** Group 11, "Structured methods". Use measure 11a only if 11b is not suited to the domain for SIL 3+4.

1.3. Table A.3 – Software design and development – support tools and programming language

| | Technique/Measure * | Ref. | SIL 1 | SIL 2 | SIL 3 | SIL 4 | Verification of technique/measure | | |
|----|--|-------|-------|-------|-------|-------|-----------------------------------|----------------------------------|--------|
| | | | | | | | Applied | Description | Result |
| 1 | Suitable programming language | C.4.5 | ++ | ++ | ++ | ++ | Yes | C programming language selected | OK |
| 2 | Strongly typed programming language | C.4.1 | ++ | ++ | ++ | ++ | Yes | C programming language selected | OK |
| 3 | Language subset | C.4.2 | 0 | 0 | ++ | ++ | Yes | -- | OK |
| 4a | Certified tools and certified translators | C.4.3 | + | ++ | ++ | ++ | Yes | Eclipse IDE used for development | OK |
| 4b | Tools and translators: increased confidence from use | C.4.4 | ++ | ++ | ++ | ++ | -- | -- | -- |

NOTE 1: See Table C.3. of IEC 61508-3.

NOTE 2: The references (which are informative, not normative) "B.x.x.x", "C.x.x.x" in column 3 (Ref.) indicate detailed descriptions of techniques/measures given in Annexes B and C of IEC 61508-7.

* Appropriate techniques/measures shall be selected according to the safety integrity level. Alternate or equivalent techniques/measures are indicated by a letter following the number. It is intended the only one of the alternate or equivalent techniques/measures should be satisfied. The choice of alternative technique should be justified in accordance with the properties, given in Annex C, desirable in the particular application.

1.4. Table A.4 – Software design and development – detailed design

| | Technique/Measure * | Siehe | SIL 1 | SIL 2 | SIL 3 | SIL 4 | Verification of technique/measure | | |
|--|---|-----------------|-------|-------|-------|-------|-----------------------------------|---|--------|
| | | | | | | | Applied | Description | Result |
| 1a | Structured methods ** | C.2.1 | ++ | ++ | ++ | ++ | Yes | Block diagram and flow charts are used in 05_SW-System_Module_Specification | OK |
| 1b | Semi-formal methods ** | Table B.7 | + | ++ | ++ | ++ | -- | -- | -- |
| 1c | Formal design and refinement methods ** | B.2.2, C.2.4 | 0 | + | + | ++ | -- | -- | -- |
| 2 | Computer-aided design tools | B.3.5 | + | + | ++ | ++ | No | Not required considering the project scope | OK |
| 3 | Defensive programming | C.2.5 | 0 | + | ++ | ++ | Yes | System state initialized with failure state | OK |
| 4 | Modular approach | Table B.9 | ++ | ++ | ++ | ++ | Yes | Sub functions are implemented as per 05_SW-System_Module_Specification | OK |
| 5 | Design and coding standards | C.2.6 Table B.1 | + | ++ | ++ | ++ | Yes | MISRA C:2012 dataset used | OK |
| 6 | Structured programming | C.2.7 | ++ | ++ | ++ | ++ | Yes | Implemented as per 05_SW-System_Module_Specification | OK |
| 7 | Use of trusted/verified software elements (if available) | C.2.10 | + | ++ | ++ | ++ | -- | -- | -- |
| 8 | Forward traceability between the software safety requirements specification and software design | C.2.11 | + | + | ++ | ++ | | Traceability can be verified in 00_Requirement_Tracking_Template_V01_2 | OK |
| <p><u>Anmerkung 1:</u> See Table C.4 of IEC 61508-3.</p> <p><u>Anmerkung 2:</u> There is still debate about the suitability of OO software development for safety-related systems. See Annex G of IEC 61508-7 for guidance on object oriented architecture and design.</p> <p><u>Anmerkung 3:</u> The references (which are informative, not normative) "B.x.x.x", "C.x.x.x" in column 3 (Ref.) indicate detailed descriptions of techniques/measures given in Annexes B and C of IEC 61508-7.</p> | | | | | | | | | |
| <p>* Appropriate techniques/measures shall be selected according to the safety integrity level. Alternate or equivalent techniques/measures are indicated by a letter following the number. It is intended the only one of the alternate or equivalent techniques/measures should be satisfied. The choice of alternative technique should be justified in accordance with the properties, given in Annex C, desirable in the particular application.</p> | | | | | | | | | |
| <p>** Group 1, "Structured methods". Use measure 1a only if 1b is not suited to the domain for SIL 3+4.</p> | | | | | | | | | |

1.5. Table A.5 – Software design and development – software module testing and integration

| | Technique/Measure * | Ref. | SIL 1 | SIL 2 | SIL 3 | SIL 4 | Verification of technique/measure | | |
|--|---|-------------------------|-------|-------|-------|-------|-----------------------------------|--|--------|
| | | | | | | | Applied | Description | Result |
| 1 | Probabilistic testing | C.5.1 | 0 | + | + | + | No | Not required considering the project scope | OK |
| 2 | Dynamic analysis and testing | B.6.5, Table B.2 | + | ++ | ++ | ++ | Yes | Boundary values and negative tests implemented | OK |
| 3 | Data recording and analysis | C.5.2 | ++ | ++ | ++ | ++ | No | Not required considering the project scope | OK |
| 4 | Functional and black box testing | B.5.1, B.5.2, Table B.3 | ++ | ++ | ++ | ++ | Yes | | OK |
| 5 | Performance testing | Table B.6 | + | + | ++ | ++ | No | Not required considering the project scope | OK |
| 6 | Model based testing | C.5.27 | + | + | ++ | ++ | No | Not required considering the project scope | OK |
| 7 | Interface testing | C.5.3 | + | + | ++ | ++ | No | Not required considering the project scope | OK |
| 8 | Test management and automation tools | C.4.7 | + | ++ | ++ | ++ | No | Not required considering the project scope | OK |
| 9 | Forward traceability between the software design specification and the module and integration test specifications | C.2.11 | + | + | ++ | ++ | Yes | Can be verified with 06_SW-System_Test_Plan_Template_V01_0 | OK |
| 10 | Formal verification | C.5.12 | 0 | 0 | + | + | Yes | Implemented | OK |
| <p>NOTE 1: Software module and integration testing are verification activities (see Table B.9).</p> <p>NOTE 2: See Table C.5 of IEC 61508-3.</p> <p>NOTE 3: Technique 9. Formal verification may reduce the amount and extent of module and integration testing required</p> <p>NOTE 4: The references (which are informative, not normative) "B.x.x.x", "C.x.x.x" in column 3 (Ref.) indicate detailed descriptions of techniques/measures given in Annexes B and C of IEC 61508-7.</p> | | | | | | | | | |
| * Appropriate techniques/measures shall be selected according to the safety integrity level. | | | | | | | | | |

1.6. Tabelle A.6 – Programmable electronics integration (hardware and software)

| | Technique/Measure * | Ref. | SIL 1 | SIL 2 | SIL 3 | SIL 4 | Verification of technique/measure | | |
|---|--|-------------------------|-------|-------|-------|-------|-----------------------------------|---|--------|
| | | | | | | | Applied | Description | Result |
| 1 | Functional and black box testing | B.5.1, B.5.2, Table B.3 | ++ | ++ | ++ | ++ | No | Project implemented as a hardware independent library | OK |
| 2 | Performance testing | Table B.6 | + | + | ++ | ++ | No | Project implemented as a hardware independent library | OK |
| 3 | Forward traceability between the system and software design requirements for hardware/software integration and the hardware/software integration test specifications | C.2.11 | + | + | ++ | ++ | No | Project implemented as a hardware independent library | OK |

NOTE 1: Programmable electronics integration is a verification activity (see Table A.9).
 NOTE 2: See Table C.6 of IEC 61508-3.
 NOTE 3: The references (which are informative, not normative) "B.x.x.x", "C.x.x.x" in column 3 (Ref.) indicate detailed descriptions of techniques/measures given in Annexes B and C of IEC 61508-7.

* Appropriate techniques/measures shall be selected according to the safety integrity level.

1.7. Tabelle A.7 – Software aspects of system safety validation

| | Technique/Measure * | Ref. | SIL 1 | SIL 2 | SIL 3 | SIL 4 | Verification of technique/measure | | |
|---|--|-------------------------|-------|-------|-------|-------|-----------------------------------|--|--------|
| | | | | | | | Applied | Description | Result |
| 1 | Probabilistic testing | C.5.1 | 0 | + | + | ++ | No | Not required considering the project scope | OK |
| 2 | Process simulation | C.5.18 | + | + | ++ | ++ | No | Not required considering the project scope | OK |
| 3 | Modelling | Table B.5 | + | + | ++ | ++ | No | Not required considering the project scope | OK |
| 4 | Functional and black-box testing | B.5.1, B.5.2, Table B.3 | ++ | ++ | ++ | ++ | Yes | Implemented as per 06_SW-System_Test_Plan_Template_V01_0 | OK |
| 5 | Forward traceability between the software safety requirements specification and the software safety validation plan | C.2.11 | + | + | ++ | ++ | Yes | Implemented as per 06_SW-System_Test_Plan_Template_V01_0 | OK |
| 6 | Backward traceability between the software safety validation plan and the software safety requirements specification | C.2.11 | + | + | ++ | ++ | Yes | Implemented as per 06_SW-System_Test_Plan_Template_V01_0 | OK |

NOTE 1: See Table C.7 of IEC 61508-3.
 NOTE 2: The references (which are informative, not normative) "B.x.x.x", "C.x.x.x" in column 3 (Ref.) indicate detailed descriptions of techniques/measures given in Annexes B and C of IEC 61508-7.

* Appropriate techniques/measures shall be selected according to the safety integrity level.

1.8. Table A.8 – Modification

| | Technique/Measure * | Ref. | SIL 1 | SIL 2 | SIL 3 | SIL 4 | Verification of technique/measure | | |
|---|---|-----------|-------|-------|-------|-------|-----------------------------------|-------------|--------|
| | | | | | | | Applied | Description | Result |
| 1 | Impact analysis | C.5.23 | ++ | ++ | ++ | ++ | -- | -- | -- |
| 2 | Reverify changed software module | C.5.23 | ++ | ++ | ++ | ++ | -- | -- | -- |
| 3 | Reverify affected software modules | C.5.23 | + | ++ | ++ | ++ | -- | -- | -- |
| 4a | Revalidate complete system | Table A.7 | 0 | + | ++ | ++ | -- | -- | -- |
| 4b | Regression validation | C.5.25 | + | ++ | ++ | ++ | -- | -- | -- |
| 5 | Software configuration management | C.5.24 | ++ | ++ | ++ | ++ | -- | -- | -- |
| 6 | Data recording and analysis | C.5.2 | ++ | ++ | ++ | ++ | -- | -- | -- |
| 7 | Forward traceability between the Software safety requirements specification and the software modification plan (including reverification and revalidation) | C.2.11 | + | + | ++ | ++ | -- | -- | -- |
| 8 | Backward traceability between the software modification plan (including reverification and revalidation) and the software safety requirements specification | C.2.11 | + | + | ++ | ++ | -- | -- | -- |
| <p>NOTE 1: See Table C.8 of IEC 61508-3.</p> <p>NOTE 2: Techniques group 4. Impact analysis is a necessary part of regression validation. See IEC 61508-7.</p> <p>NOTE 3: The references (which are informative, not normative) "B.x.x.x", "C.x.x.x" in column 3 (Ref.) indicate detailed descriptions of techniques/measures given in Annexes B and C of IEC 61508-7.</p> <p>* Appropriate techniques/measures shall be selected according to the safety integrity level. Alternate or equivalent techniques/measures are indicated by a letter following the number. It is intended the only one of the alternate or equivalent techniques/measures should be satisfied. The choice of alternative technique should be justified in accordance with the properties, given in Annex C, desirable in the particular application.</p> | | | | | | | | | |

1.9. Table A.9 – Software verification

| | Technique/Measure * | Ref. | SIL 1 | SIL 2 | SIL 3 | SIL 4 | Verification of technique/measure | | |
|--|--|------------------|-------|-------|-------|-------|-----------------------------------|---|--------|
| | | | | | | | Applied | Description | Result |
| 1 | Formal proof | C.5.12 | 0 | + | + | ++ | Yes | Test results are stored in the company server | OK |
| 2 | Animation of specification and design | C.5.26 | + | + | + | + | -- | -- | -- |
| 3 | Static analysis | B.6.4, Table B.8 | + | ++ | ++ | ++ | -- | -- | -- |
| 4 | Dynamic analysis and testing | B.6.5, Table B.2 | + | ++ | ++ | ++ | -- | -- | -- |
| 5 | Forward traceability between the software design specification and the software verification (including data verification) plan | C.2.11 | + | + | ++ | ++ | -- | -- | -- |
| 6 | Backward traceability between the software verification (including data verification) plan and the software design specification | C.2.11 | + | + | ++ | ++ | -- | -- | -- |
| 7 | Offline numerical analysis | C.2.13 | + | + | ++ | ++ | -- | -- | -- |
| Software module testing and integration | | Siehe Table A.5 | | | | | | | |
| Programmable electronics integration testing | | Siehe Table A.6 | | | | | | | |
| Software system testing (validation) | | Siehe Table A.7 | | | | | | | |
| <p>NOTE 1: For convenience all verification activities have been drawn together under this table. However, this does not place additional requirements for the dynamic testing element of verification in Table A.5 and Table A.6 which are verification activities in themselves. Nor does this table require verification testing in addition to software validation (see Table B.7), which in this standard is the demonstration of conformance to the safety requirements specification (end-end verification).</p> <p>NOTE 2: Verification crosses the boundaries of IEC 61508-1, IEC 61508-2 and IEC 61508-3. Therefore, the first verification of the safety-related system is against the earlier system level specifications.</p> <p>NOTE 3: In the early phases of the software safety lifecycle verification is static, for example inspection, review, formal proof. When code is produced dynamic testing becomes possible. It is the combination of both types of information that is required for verification. For example, code verification of a software module by static means includes such techniques as software inspections, walk-throughs, static analysis, formal proof. Code verification by dynamic means includes functional testing, white-box testing, statistical testing. It is the combination of both types of evidence that provides assurance that each software module satisfies its associated specification.</p> <p>NOTE 4: See Table C.9 of IEC 61508-3.</p> <p>NOTE 5: The references (which are informative, not normative) “B.x.x.x”, “C.x.x.x” in column 3 (Ref.) indicate detailed descriptions of techniques/measures given in Annexes B and C of IEC 61508-7.</p> | | | | | | | | | |
| * Appropriate techniques/measures shall be selected according to the safety integrity level. | | | | | | | | | |

1.10. Table A.10 – Functional safety assessment

| | Technique/Measure * | Ref. | SIL 1 | SIL 2 | SIL 3 | SIL 4 | Verification of technique/measure | | |
|---|--|-----------|-------|-------|-------|-------|-----------------------------------|---|--------|
| | | | | | | | Applied | Description | Result |
| 1 | Checklists | B.2.5 | + | + | + | + | Yes | -- | |
| 2 | Decision/truth tables | C.6.1 | + | + | + | + | No | -- | |
| 3 | Failure analysis | Table B.4 | + | + | ++ | ++ | Yes | Possible failures are identified and mitigation actions implemented | OK |
| 4 | Common cause failure analysis of diverse software (if diverse software is actually used) | C.6.3 | 0 | + | ++ | ++ | No | Diverse SW is not used | OK |
| 5 | Reliability block diagram | C.6.4 | + | + | + | + | No | Not required considering the project scope | OK |
| 6 | Forward traceability between the requirements of clause 8 and the plan for software functional safety assessment | C.2.11 | + | + | ++ | ++ | Yes | Implemented | OK |

Anmerkung 1: See Table C.10 of IEC 61508-3

Anmerkung 2: The references (which are informative, not normative) "B.x.x.x", "C.x.x.x" in column 3 (Ref.) indicate detailed descriptions of techniques/measures given in Annexes B and C of IEC 61508-7.

* Appropriate techniques/measures shall be selected according to the safety integrity level.

2. Detailed tables

2.1. Table B.1 – Design and coding standards

| | Technique/Measure * | Ref. | SIL 1 | SIL 2 | SIL 3 | SIL 4 | Verification of technique/measure | | |
|---|--|---------|-------|-------|-------|-------|-----------------------------------|---------------------------------------|--------|
| | | | | | | | Applied | Description | Result |
| 1 | Use of coding standard to reduce likelihood of errors | C.2.6.2 | ++ | ++ | ++ | ++ | Yes | Misra C:2012 standard guidelines used | OK |
| 2 | No dynamic objects | C.2.6.3 | + | ++ | ++ | ++ | Yes | No dynamic objects implemented | OK |
| 3a | No dynamic variables | C.2.6.3 | 0 | + | ++ | ++ | Yes | No dynamic variables implemented | OK |
| 3b | Online checking of the installation of dynamic variables | C.2.6.4 | 0 | + | + | ++ | -- | -- | -- |
| 4 | Limited use of interrupts | C.2.6.5 | + | + | ++ | ++ | -- | -- | -- |
| 5 | Limited use of pointers | C.2.6.6 | 0 | + | ++ | ++ | -- | -- | -- |
| 6 | Limited use of recursion | C.2.6.7 | 0 | + | ++ | ++ | -- | -- | -- |
| 7 | No unstructured control flow in programs in higher level languages | C.2.6.2 | + | ++ | ++ | ++ | -- | -- | -- |
| 8 | No automatic type conversion | C.2.6.2 | + | ++ | ++ | ++ | -- | -- | -- |
| <p>NOTE 1: Measures 2, 3a and 5. The use of dynamic objects (for example on the execution stack or on a heap) may impose requirements on both available memory and also execution time. Measures 2, 3a and 5 do not need to be applied if a compiler is used which ensures a) that sufficient memory for all dynamic variables and objects will be allocated before runtime, or which guarantees that in case of memory allocation error, a safe state is achieved; b) that response times meet the requirements.</p> <p>NOTE 2: See Table C.11 of IEC 61508-3</p> <p>NOTE 3: The references (which are informative, not normative) "B.x.x.x", "C.x.x.x" in column 3 (Ref.) indicate detailed descriptions of techniques/measures given in Annexes B and C of IEC 61508-7.</p> | | | | | | | | | |
| <p>* Appropriate techniques/measures shall be selected according to the safety integrity level. Alternate or equivalent techniques/measures are indicated by a letter following the number. It is intended the only one of the alternate or equivalent techniques/measures should be satisfied. The choice of alternative technique should be justified in accordance with the properties, given in Annex C, desirable in the particular application.</p> | | | | | | | | | |

2.2. Table B.2 – Dynamic analysis and testing

| | Technique/Measure * | Ref. | SIL 1 | SIL 2 | SIL 3 | SIL 4 | Verification of technique/measure | | |
|----|---|--------|-------|-------|-------|-------|-----------------------------------|--------------|--------|
| | | | | | | | Applied | Description | Result |
| 1 | Test case execution from boundary value analysis | C.5.4 | + | ++ | ++ | ++ | Yes | Implemented | OK |
| 2 | Test case execution from error guessing | C.5.5 | + | + | + | + | Yes | Implemented | OK |
| 3 | Test case execution from error seeding | C.5.6 | 0 | + | + | + | Yes | Implemented | OK |
| 4 | Test case execution from model-based test case generation | C.5.27 | + | + | ++ | ++ | No | Not required | OK |
| 5 | Performance modelling | C.5.20 | + | + | + | ++ | No | Not required | OK |
| 6 | Equivalence classes and input partition testing | C.5.7 | + | + | + | ++ | No | Not required | OK |
| 7a | Structural test coverage (entry points) 100 % ** | C.5.8 | ++ | ++ | ++ | ++ | Yes | Implemented | OK |
| 7b | Structural test coverage (statements) 100 %** | C.5.8 | + | ++ | ++ | ++ | Yes | Implemented | OK |
| 7c | Structural test coverage (branches) 100 %** | C.5.8 | + | + | ++ | ++ | Yes | Implemented | OK |
| 7d | Structural test coverage (conditions, MC/DC) 100 %** | C.5.8 | + | + | + | ++ | Yes | Implemented | OK |

NOTE 1: The analysis for the test cases is at the subsystem level and is based on the specification and/or the specification and the code.

NOTE 2: See Table C.12 of IEC 61508-3.

NOTE 3: The references (which are informative, not normative) "B.x.x.x", "C.x.x.x" in column 3 (Ref.) indicate detailed descriptions of techniques/measures given in Annexes B and C of IEC 61508-7.

* Appropriate techniques/measures shall be selected according to the safety integrity level.

** Where 100 % coverage cannot be achieved (e.g. statement coverage of defensive code), an appropriate explanation should be given.

2.3. Table B.3 – Functional and black-box testing

| | Technique/Measure * | Ref. | SIL 1 | SIL 2 | SIL 3 | SIL 4 | Verification of technique/measure | | |
|---|--|--------------|-------|-------|-------|-------|-----------------------------------|--|--------|
| | | | | | | | Applied | Description | Result |
| 1 | Test case execution from cause consequence diagrams | B.6.6.2 | 0 | 0 | + | + | No | Not required considering the project scope | OK |
| 2 | Test case execution from model-based test case generation | C.5.27 | + | + | ++ | ++ | No | Not required considering the project scope | OK |
| 3 | Prototyping/animation | C.5.17 | 0 | 0 | + | + | No | Not required considering the project scope | OK |
| 4 | Equivalence classes and input partition testing, including boundary value analysis | C.5.7, C.5.4 | + | ++ | ++ | ++ | No | Not required considering the project scope | OK |
| 5 | Process simulation | C.5.18 | + | + | + | + | No | Not required considering the project scope | OK |
| <p>NOTE 1: The analysis for the test cases is at the software system level and is based on the specification only.</p> <p>NOTE 2: The completeness of the simulation will depend upon the safety integrity level, complexity and application.</p> <p>NOTE 3: See Table C.13 of IEC 61508-3.</p> <p>NOTE 4: The references (which are informative, not normative) "B.x.x.x", "C.x.x.x" in column 3 (Ref.) indicate detailed descriptions of techniques/measures given in Annexes B and C of IEC 61508-7.</p> | | | | | | | | | |
| * Appropriate techniques/measures shall be selected according to the safety integrity level. | | | | | | | | | |

2.4. Table B.4 – Failure analysis

| | Technique/Measure * | Ref. | SIL 1 | SIL 2 | SIL 3 | SIL 4 | Verification of technique/measure | | |
|--|--------------------------------------|---------|-------|-------|-------|-------|-----------------------------------|-------------|--------|
| | | | | | | | Applied | Description | Result |
| 1a | Cause consequence diagrams | B.6.6.2 | + | + | + | + | Yes | Implemented | OK |
| 1b | Event tree analysis | B.6.6.3 | + | + | + | + | -- | -- | -- |
| 2 | Fault tree analysis | B.6.6.5 | + | + | + | + | Yes | Implemented | OK |
| 3 | Software functional failure analysis | B.6.6.4 | + | + | + | + | Yes | Implemented | OK |
| <p>NOTE 1: Preliminary hazard analysis should have already taken place in order to categorize the software into the most appropriate safety integrity level.</p> <p>NOTE 2: See Table C.14 of IEC 61508-3.</p> <p>NOTE 3: The references (which are informative, not normative) "B.x.x.x", "C.x.x.x" in column 3 (Ref.) indicate detailed descriptions of techniques/measures given in Annexes B and C of IEC 61508-7.</p> | | | | | | | | | |
| * Appropriate techniques/measures shall be selected according to the safety integrity level. Alternate or equivalent techniques/measures are indicated by a letter following the number. It is intended the only one of the alternate or equivalent techniques/measures should be satisfied. The choice of alternative technique should be justified in accordance with the properties, given in Annex C, desirable in the particular application. | | | | | | | | | |

2.5. Table B.5 – Modelling

| | Technique/Measure * | Ref. | SIL 1 | SIL 2 | SIL 3 | SIL 4 | Verification of technique/measure | | |
|---|-----------------------|--------------|-------|-------|-------|-------|-----------------------------------|--------------|--------|
| | | | | | | | Applied | Description | Result |
| 1 | Data flow diagrams | C.2.2 | + | + | + | + | No | Not required | OK |
| 2a | Finite state machines | B.2.3.2 | 0 | + | ++ | ++ | No | Not required | OK |
| 2b | Formal methods | B.2.2, C.2.4 | 0 | + | + | ++ | Yes | Implemented | OK |
| 2c | Time Petri nets | B.2.3.3 | 0 | + | ++ | ++ | No | Not required | OK |
| 3 | Performance modelling | C.5.20 | + | ++ | ++ | ++ | No | Not required | OK |
| 4 | Prototyping/animation | C.5.17 | + | + | + | + | No | Not required | OK |
| 5 | Structure diagrams | C.2.3 | + | + | + | ++ | Yes | Implemented | OK |
| <p>NOTE 1: If a specific technique is not listed in the table, it should not be assumed that it is excluded from consideration. It should conform to this standard.</p> <p>NOTE 2: Quantification of probabilities is not required.</p> <p>NOTE 3: See Table C.15 of IEC 61508-3.</p> <p>NOTE 4: The references (which are informative, not normative) "B.x.x.x", "C.x.x.x" in column 3 (Ref.) indicate detailed descriptions of techniques/measures given in Annexes B and C of IEC 61508-7.</p> | | | | | | | | | |
| <p>* Appropriate techniques/measures shall be selected according to the safety integrity level. Alternate or equivalent techniques/measures are indicated by a letter following the number. It is intended the only one of the alternate or equivalent techniques/measures should be satisfied. The choice of alternative technique should be justified in accordance with the properties, given in Annex C, desirable in the particular application.</p> | | | | | | | | | |

2.6. Table B.6 – Performance testing

| | Technique/Measure * | Ref. | SIL 1 | SIL 2 | SIL 3 | SIL 4 | Verification of technique/measure | | |
|--|---|--------|-------|-------|-------|-------|-----------------------------------|--------------|--------|
| | | | | | | | Applied | Description | Result |
| 1 | Avalanche/stress testing | C.5.21 | + | + | ++ | ++ | No | Not required | OK |
| 2 | Response timings and memory constraints | C.5.22 | ++ | ++ | ++ | ++ | No | Not required | OK |
| 3 | Performance requirements | C.5.19 | ++ | ++ | ++ | ++ | No | Not required | OK |
| <p>NOTE 1: See Table C.16.</p> <p>NOTE 2: The references (which are informative, not normative) "B.x.x.x", "C.x.x.x" in column 3 (Ref.) indicate detailed descriptions of techniques/measures given in Annexes B and C of IEC 61508-7.</p> | | | | | | | | | |
| <p>* Appropriate techniques/measures shall be selected according to the safety integrity level.</p> | | | | | | | | | |

2.7. Table B.7 – Semi-formal methods

| | Technique/Measure * | Ref. | SIL 1 | SIL 2 | SIL 3 | SIL 4 | Verification of technique/measure | | |
|----|---|------------|-------|-------|-------|-------|-----------------------------------|--|--------|
| | | | | | | | Applied | Description | Result |
| 1 | Logic/function block diagrams | See Note 1 | + | + | ++ | ++ | Yes | Block Diagram of SW Modules implemented in 05_SW-System_Module_Specification | OK |
| 2 | Data flow diagrams | See Note 1 | + | + | ++ | ++ | No | Not required | OK |
| 3 | Data flow diagrams | C.2.2 | + | + | + | + | No | Not required | OK |
| 4a | Finite state machines/state transition diagrams | B.2.3.2 | + | + | ++ | ++ | No | Not required | OK |
| 4b | Time Petri nets | B.2.3.3 | + | + | ++ | ++ | No | Not required | OK |
| 5 | Entity-relationship-attribute data models | B.2.4.4 | + | + | + | + | No | Not required | OK |
| 6 | Message sequence charts | C.2.14 | + | + | + | + | No | Not required | OK |
| 7 | Decision/truth tables | C.6.1 | + | + | ++ | ++ | No | Not required | OK |
| 8 | UML | C.3.12 | + | + | + | + | No | Not required | OK |

NOTE 1: Logic/function block diagrams and sequence diagrams are described in IEC 61131-3.

NOTE 2: See Table C.17 of IEC 61508-3.

NOTE 3: The references "B.x.x.x", "C.x.x.x" in column 3 (Ref.) indicate detailed descriptions of techniques/measures given in Annexes B and C of IEC 61508-7.

* Appropriate techniques/measures shall be selected according to the safety integrity level. Alternate or equivalent techniques/measures are indicated by a letter following the number. It is intended the only one of the alternate or equivalent techniques/measures should be satisfied. The choice of alternative technique should be justified in accordance with the properties, given in Annex C, desirable in the particular application.

2.8. Table B.8 – Static analysis

| | Technique/Measure * | Ref. | SIL 1 | SIL 2 | SIL 3 | SIL 4 | Verification of technique/measure | | |
|--|---|--------------|-------|-------|-------|-------|-----------------------------------|--|--------|
| | | | | | | | Applied | Description | Result |
| 1 | Boundary value analysis | C.5.4 | + | + | ++ | ++ | No | Not required considering the project scope | OK |
| 2 | Checklists | B.2.5 | + | + | + | + | No | Not required considering the project scope | OK |
| 3 | Control flow analysis | C.5.9 | + | ++ | ++ | ++ | No | Not required considering the project scope | OK |
| 4 | Data flow analysis | C.5.10 | + | ++ | ++ | ++ | No | Not required considering the project scope | OK |
| 5 | Error guessing | C.5.5 | + | + | + | + | No | Not required considering the project scope | OK |
| 6a | Formal inspections, including specific criteria | C.5.14 | + | + | ++ | ++ | No | Not required considering the project scope | OK |
| 6b | Walk-through (software) | C.5.15 | + | + | + | + | No | Not required considering the project scope | OK |
| 7 | Symbolic execution | C.5.11 | 0 | 0 | + | + | No | Not required considering the project scope | OK |
| 8 | Design review | C.5.16 | ++ | ++ | ++ | ++ | No | Not required considering the project scope | OK |
| 9 | Static analysis of run time error behaviour | B.2.2, C.2.4 | + | + | + | ++ | No | Not required considering the project scope | OK |
| 10 | Worst-case execution time analysis | C.5.20 | + | + | + | + | No | Not required considering the project scope | OK |
| <p>NOTE 1: See Table C.18 of IEC 61508-3.</p> <p>NOTE 2: The references "B.x.x.x", "C.x.x.x" in column 3 (Ref.) indicate detailed descriptions of techniques/measures given in Annexes B and C of IEC 61508-7.</p> <p>* Appropriate techniques/measures shall be selected according to the safety integrity level. Alternate or equivalent techniques/measures are indicated by a letter following the number. It is intended the only one of the alternate or equivalent techniques/measures should be satisfied. The choice of alternative technique should be justified in accordance with the properties, given in Annex C, desirable in the particular application.</p> | | | | | | | | | |

2.9. Table B.9 – Modular approach

| | Technique/Measure * | Ref. | SIL 1 | SIL 2 | SIL 3 | SIL 4 | Verification of technique/measure | | |
|--|--|--------|-------|-------|-------|-------|-----------------------------------|--|--------|
| | | | | | | | Applied | Description | Result |
| 1 | Software module size limit | C.2.9 | ++ | ++ | ++ | ++ | No | Not required considering the project scope | OK |
| 2 | Software complexity control | C.5.13 | + | + | ++ | ++ | Yes | Implemented | OK |
| 3 | Information hiding/encapsulation | C.2.8 | + | ++ | ++ | ++ | Yes | Implemented | OK |
| 4 | Parameter number limit / fixed number of subprogram parameters | C.2.9 | + | + | + | + | Yes | Implemented | OK |
| 5 | One entry/one exit point in subroutines and functions | C.2.9 | ++ | ++ | ++ | ++ | Yes | Implemented | OK |
| 6 | Fully defined interface | C.2.9 | ++ | ++ | ++ | ++ | No | Not required considering the project scope | OK |
| <p>NOTE 1: See Table C.19 of IEC 61508-3.</p> <p>NOTE 2: The references "B.x.x.x", "C.x.x.x" in column 3 (Ref.) indicate detailed descriptions of techniques/measures given in Annexes B and C of IEC 61508-7.</p> | | | | | | | | | |
| * Appropriate techniques/measures shall be selected according to the safety integrity level. No single technique is likely to be sufficient. All appropriate techniques shall be considered. | | | | | | | | | |
